Dear Dad,		
I'm writing this letter to you because it	's too difficult to talk abou	it it. I can't
stop thinking my uncle and how he died	21, I seriously want to	ask you to
stop smoking. I've looked up a lot of information	mation about smoking and	I've found
out some22 things.		
You've already know that smoking can	2_3cancer. Over 100.	,000 people
2_4from smoking every year in Brit	ain. It's the second bigge	st cause of
death in the world.		
When my2_5 asks you to smol	ke outside, you think she's	just being
difficult. She doesn't like the smell of smok	ce in the house .It's not ver	y pleasant.
When you smoke, it's also bad for me and	Mum. Because of the 2_6	5of the
other people's smoking, more and more nor	1-smokers are 2_7ill.	
I know it is very difficult to stop smol	king <u>28</u> you mustn't g	give in to it.
Please see the doctor and ask him for help		
you. Above all ,you must30save	your life. I don't want to	o lose you!
Please don't smoke!		
Your loving son,		
Tony

One way that scientists learn about man is by studying animals. In this lab, the scientists are studying the relationship between diet and health. They are studying their diet and their health. The mice are in three groups. All three groups are receiving the same healthy food. The first group is eating one cup of food each day, the second group is eating two cups, and the third group is eating three cups.

After three years, the healthiest group is the one that is only eating one cup of food each day. The mice in this group are a little thinner. But they are more active. Most of the day, they are running, playing with one another. Also, they are living longer. Mice usually live for two years. Most of the mice in this group are still alive after three years.

The second group of mice is healthy, too. They are active, but not as active as the thinner mice. They are only living about two years.

The last group of mice is receiving more food than the other two groups. Most of the day, these mice are eating or sleeping. They are not very active. These mice are living longer than the scientists thought----about a year and a half. But they are not healthy. They are sick more often than the other two groups.

groups.		
31. Each group of the mice is given amount of food every day.		
A. a different B. the same C.a small D. a large		
32. The experiment lasted for at least years.		
A. one and a half. B. two C. two and a half D. three		
33. The underlined word 'they" in the second paragraph refers to		
A. the scientists B. the mice in the first group C. all the mice		
D. the mice in the last group		
34. The best title for the passage is		
A. Man and health B. Diet and animals		
C. Diet and health D. Animals and human beings		
35. The result of the experiment mainly shows that		
A. eating less may bring longer life		
B. the mice eat more than the scientists thought		
C. the mice live longer than the scientists thought		
D. the more exercise you take, the healthier you will be
